Moreover, it discusses shortcomings of the methods applied. Trade liberalization has been and still is an important driver of economic growth worldwide. Many countries cut down tariffs for the import of goods originating from selected trade partner countries in regional trade agreements (RTAs) to make benefits of increased trade between the partners mutually accessible to the participants. Meanwhile each participating country of a RTA keeps up its own tariffs for trade partners outside the RTA. These tariffs usually vary from member to member and hence provided outsiders an incentive to ship their products via the lowest-tariff-country of a RTA into the country of final destination, hence being exempt from the higher tariffs of the country of final destination. In order to guarantee that the preferential tariff treatment is...
